DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The Walnut Valley Grist Mill is a large mill three stories in height. It has a gambrel roof covered with sheet metal. The roof rafters are pegged and the original roof was cedar shake. The first two stories are built of fieldstone as are the foundation walls. There is a full basement or cellar which houses the remaining mill works. The mill is two bays wide and approximately seven long. There are several small frame additions on the west side of the structure. On the north end is a door that looks over the mill race. Above, the door is a line of stone that looks like the roof line of a porch roof or pent eave. On the same wall in the cellar wall is the remains of the opening that allowed the water to enter the building. It has an arched support. Off the north west corner of the mill is a flood gate presumably to control the flow of water into the mill. Next to an entrance on the west wall is a date stone with the initials R.D. 1847. The flooring is random width pine, supported by hand-hewn joists. A door on the north wall is board and batten with strap hinges. It is built of beaded boards nailed together with rosehead nails. The steps from the first to second floor are morticed and tenoned together. Large numbered grain bins take up much space with wooden chutes leading from them to loading areas.

SPECIFIC DATES

1847

BUILDER/ARCHITECT

Robert Carter

STATEMENT OF SIGNIFICANCE

The Walnut Valley Grist Mill was partially built by Robert Carter, a papermaker, in 1847. Part of the stone section might date from the late 1700's and could have been used as a flax mill. The father of Robert Brookings managed this mill for a brief time in the early 1800's.
